Notice 5

Observed Performance Factor (OPF)

In accordance with ORCs Rule 308, a yacht's rating may be adjusted by an Observed Performance Factor (OPF). OPF is adjusting time allowances for yacht's performance for light and strong wind while effect on the three wind ranges in between is calculated proportionally between light and strong wind. It is expressed in percentage of modification of time allowances.

OPF may be applied prior to regattas, between regattas or between races at a regatta by the SYRA and ORC Rating Office when there is evidence from race tracking data and/or from observed performance and timings that the yacht's elapsed time (for a race or part of a race) is significantly different from that predicted based on the rating allowances published on the certificate (ORCs 308.1 b). An OPF may also be applied based on unusual class composition ((ORCs 308.1 c). The OPF process is fully transparent with any OPF denoted on the yacht's ORCs handicap certificate.

Pre-regatta Observed Performance Factors (OPF's) have been assigned to the following yachts:
